Abstract

Method and system for diverting telecommunications connections

of for diverting In the case a method telecommunications connections, a prescribed number of first identifications  $(Al_1 - Al_N)$  are available. Upon request to participate in the diverting method, a line identification  $(A1_1 - A1_N)$  that is still free is allocated, all telecommunications connections directed to this line identification (Al<sub>1</sub>) subsequently being diverted to a telecommunications terminal (A2).
